

## **TYRE SERVICE RECORD**

Please ensure that your tyre service information is recorded below at the recommended service interval.

DATE OF ROTATION	ODOMETER	DEALER NAME	DEALER ADDRESS	FRONT AIR PRESSURE	REAR AIR PRESSURE

For maximum tyre life, it is important to follow the recommended 10,000 Km intervals or less for light truck tyres. After each rotation, set the tyre air pressure as recommended on the vehicle's tyre information placard or by your tyre professional if the original size has been changed to an optional size.
